

The Society for Sedimentary Geology (**SEPM**) is a 501c3 non-profit society that focuses specifically on enriching professionals and SEPM students within **sedimentary geology**.

SEPM offers membership and resources for professionals and students in this field to **connect, network, publish** and **grow**.

WHO WE ARE

Around since **1926**, SEPM is a diverse organization with members ranging from grad students to world-famous professionals and academics.

We work to **support our members** not only professionally, but also by gifting **research grants**, recognizing work through annual **awards** and highlighting exciting science in the **news**.

BENEFITS OF MEMBERSHIP

Publications

We support our members' science through three major scientific journals, the **Journal of Sedimentary Research (JSR)**, **The Sedimentary Record (TSR)** and **PALAIOS**, in addition to producing research conferences, short courses and **Special Publications**.

Research Groups

Our research groups bring together scientists with common research interests to share scientific research, determine best practices and consensus standards for their area of study. We currently host groups for **Carbonates, Clastics Diagenesis, Deepwater Deposition, Micropaleontology** and **Planetary Sedimentology**.

Ambassadors

Our international ambassadors help create a local network of peers where you call home.

HOW TO GET INVOLVED

Join

Join the largest organization dedicated to sedimentary geoscience. Exchange knowledge and research at our meetings and in our bespoke publications, receive *Geofacets* access, advance your career, network with peers, serve on committees and learn with our regional and topic-specific research and regional groups.

Learn

Enhance your continuing education with SEPM-hosted short courses, field trips, poster sessions, conferences, innovative publications and other creative ways.

Publish

Gain exposure to the global sedimentary and paleontology geological communities by publishing with SEPM and enhancing your work through our rigorous and constructive editorial review process.
